

Human Waste and Infection Control

About Jalkin

Jalkin Ltd. specialises in the complete process of human waste management, from source at the resident to the point where it becomes the responsibility of your Water Company or the Environment Agency.

We are also passionate about hygiene and cross-infection risk reduction, one of the fastest growing problems within all healthcare environments. It is important to know and understand your site's human waste stream, controlled from start to finish along with associated hygiene to prevent unwanted spread of infection. We refer to this scope as the "Human Waste Path", with the aim being to keep it as narrow as possible.

In these challenging financial times, ensuring compliance also needs to be achieved in ways that they are effective and cost efficient.

Jalkin Audit

Jalkin produce a data driven assessment of your site human waste management process from end to end, and associated standard operating procedures. The purpose of this is to benchmark performance and highlight opportunities for improvement in a cost effective fashion.

Jalkin Partners

We work with industry specialists on solutions to the key human waste and infection control issues typically encountered by our clients. In addition to these partners we will give independent guidance on a range of alternatives as required by the particular scenario.

- Smart asset monitoring from Moniton
- Market leading waste disposal systems by Haigh Engineering
- Off-grid packaged treatment equipment and maintenance packages from MPC Services
- The innovative Splodge range of sanitization products
- LobsterPumps waste processing

Splodge Cleaning

- Surface, Hand, Air and Machine cleaning range
- Spillage absorb powders
- Proven efficacy against 99.9% bacteria, viruses and spores tested
- Long lasting, gentle on skin
- Tested to the highest British and European Standards

Incontinence Waste

- Dispose of Incontinence using Incomaster
- Minimise expensive waste bagging
- Reduce odours and risk of contamination
- Simple to use and maintain

Smart Maintenance

- Take the guesswork out of maintenance
- Simple, low cost remote monitoring
- Maintain based on actual usage rather than Fixed Schedules
- All electrical asset types, inside and outside the building
- Predict mechanical failures before they occur

Bedpan Disposal

- Avoid infection risk and hassle of washing bedpans
- Single use products are easily disposed
- "Quattro" machine is quiet, easy to use and clean
- Save time and money

Sampling, Monitoring and Reports

- Regularly sample your site for infection
- Monitor asset usage and performance
- Address drainage issues pre-emptively
- Remain provably compliant
- Continuously improve using data
